

Khush Shah

Full Stack Engineer - Node.js / Angular / PostgreSQL / Redis - Healthcare SaaS

+91 81289 37197 | kshah17121@gmail.com | linkedin.com/in/khush-shah-j172 | github.com/khush-shah | khush-dev-portfolio.vercel.app
| Ahmedabad, India

31K users reactivated | API latency down 40% | Partner webhook failures down 80% | 4K+ monthly npm downloads

SUMMARY

Backend-heavy full stack engineer with close to 2 years of experience at a healthcare SaaS company. Work primarily in Node.js, PostgreSQL, Redis, and BullMQ on the backend, with Angular on the frontend. Have built and shipped features across a B2C medicine delivery app, a B2B chemist ERP, a doctor-facing prescription portal, and a marketing automation platform. Comfortable with third-party integrations, event-driven systems, webhook pipelines, queue-based workflows, and debugging production databases directly.

SKILLS

Backend: Node.js, Express.js, TypeScript, REST APIs, BullMQ, Redis, Socket.io, WebSockets, Webhooks, Cron Jobs, JWT, RBAC

Frontend: Angular, RxJS, TypeScript, ReactJS, HTML5, CSS3

Databases: PostgreSQL (indexing, query optimization, query plans, transactions), MongoDB, MySQL, production DB debugging

Cloud & Tools: GCP, Firebase, BigQuery, Docker, Git, Bitbucket, Swagger, Postman, Linux, CI/CD

Architecture: Event-driven systems, microservices, queue-based processing, API design, distributed systems

Published: `evital-ss0` (npm) - JWT auth, refresh token rotation, RBAC middleware - 4K+ monthly downloads

EXPERIENCE

Software Engineer (SDE-1) | **Equality Healthcare Pvt. Ltd., Ahmedabad** *July 2024 - Present*

PiLO - B2C Medicine Delivery *Node.js / Express.js / PostgreSQL / BullMQ / Redis / Socket.io / Angular*

- Primary backend developer on PiLO. Built and maintained APIs for the full order lifecycle, cart flows, fulfillment logic, and customer-facing features.
- Built the notification system using BullMQ and Redis - push notifications via OneSignal, WhatsApp Business API, and email - with retry queues, exponential backoff, dead-letter handling, and scheduling. These notification improvements **contributed to reactivating 31K users** (up from 8K).
- **Reduced partner webhook failure rate by 80%** by replacing direct calls with BullMQ retry queues, dead-letter queues, and cron reconciliation across ~1,200 daily order events.
- Worked on fulfillment logic including split orders (fulfilling across multiple pharmacies when one lacks inventory) and SLA-based automatic pharmacy reassignment.
- Integrated **Orange Health and Sterling Accuris** lab APIs - test and package booking, status polling, real-time result delivery via Socket.io, and notification flows for customers and pharmacies.
- Built the **Angular frontend for PiLO Kiosk**, a doctor-facing portal where prescriptions are uploaded, OCR converts them into a cart, and medicine orders are placed for patients. Set up eKacare and TatvaCare webhook integrations so prescriptions from those platforms route directly into the portal.

eVitalRx - B2B Chemist ERP/CRM *Node.js / PostgreSQL / Redis / Angular*

- Worked on backend modules across inventory, sales, purchase, B2B operations, and CRM, along with corresponding Angular UI components.
- Performance improvements across 12+ endpoints using **composite indexing, cursor-based pagination, and Redis caching** reduced p95 latency by ~40% and removed N+1 query issues under concurrent load.
- Built and published **evital-ss0** - open-source npm package for JWT auth, refresh token rotation, and RBAC middleware. Adopted by 3 external healthcare integrators, 4K+ monthly downloads.
- Wrote and maintained the public API documentation used by internal teams and external partners - docs.evitalrx.in.

EngageRx - B2B Marketing Automation Platform *Node.js / BullMQ / Redis / Firebase / BigQuery / Angular*

- Developed backend modules for user segmentation, campaign creation, notification scheduling, and push and WhatsApp campaign delivery for healthcare clients.
- Set up a **BigQuery and Firebase analytics pipeline** for real-time campaign dashboards covering CTR, delivery rates, and conversions, replacing manual reporting.

Healthcare APIs and Third-Party Integrations *Node.js / REST APIs / Webhooks*

- Built and maintained partner integrations for **Bajaj Health, Visit Health, Orange Health, Sterling Accuris, eKacare, and TatvaCare** - covering patient APIs, medicine catalog, order and fulfillment flows, B2B, EMR/HMIS, and webhook setup.

Employee of the Month - October 2025 | PillO lab integrations and notification reliability

EDUCATION

M.Sc. Computer Science and IT^{2022 - 2024}

Jain (Deemed-to-be) University, Bengaluru **Gold Medalist** | **CGPA 9.52 / 10**

B.Sc. Computer Applications and IT^{2019 - 2022}

Indus University, Ahmedabad **Gold Medalist** | **CGPA 9.97 / 10**
